

Automate Visualisation " Prediction " Reporting

1

The Problem: Data Analysis is Complex

Manual cleaning, multiple tools, no automation, and time-consuming reports make traditional data analysis **unscalable** and **unfriendly for beginners**.

2

The Solution: DataSci

One platform to upload, clean, visualise, predict, and report in **seconds**. From CSV upload to a professional PDF report, DataSci streamlines the entire process.

3

Key Features

Secure Firebase Authentication, interactive Plotly Auto Charts, robust Machine Learning Models, and Cloud Deployment on Render ensure a powerful and seamless experience.

4

Machine Learning Power

Our ML engine supports Regression, Classification, and Clustering, providing **accuracy and R² metrics**, with predictions seamlessly integrated into your dataset.

Built With a Robust Tech Stack

- Python & Flask for robust backend development
- Pandas & NumPy for efficient data manipulation
- Scikit-Learn for advanced machine learning capabilities
- Firebase for secure user authentication
- Render for scalable cloud deployment
- Plotly for dynamic and interactive visualisations
- ReportLab for professional PDF report generation

Explore DataSci: Live Demo & GitHub

Experience DataSci firsthand and see how it transforms complex data into actionable insights:
